EXPERIENCE

Upstox – Bangalore, India

Software Development Engineer - 3 *April - 2024 – Present*

- Designed and delivered high-throughput Spring Boot microservices (Java 11/21) handling 900+ requests/second with p99 latency < 15 ms, implementing distributed rate limiting on both gRPC and Kafka requests to protect downstream systems.
- Designed a payments processing system capable of handling 30,000+ requests in < 2 minutes during BOD/EOD spikes across multiple services, ensuring zero failures during market peaks.
- Reduced infrastructure footprint for a Tier-1 user-facing service from 30 pods to 4 pods (-87% compute) during market hours while sustaining 1,000+ requests/second, cutting AWS costs by 70%.
- Built a bi-directional WebSocket service delivering real-time market events (LTP updates) with sub-10 ms p99 latency to >100,000 concurrent web & mobile clients.

Software Development Engineer - 2 Backend *Mar - 2022 – April - 2024*

- Re-engineered a critical data-processing pipeline from 200,000 records/day to 10 million records/2 hours (≈50× throughput increase) using multi-threading, asynchronous pipelines, caching and query optimisation.
- Implemented asynchronous Kafka pipelines and dynamic cron scheduling to process 2M+ messages/day in real-time with configurable intervals/retries, reducing developer change requests by 90%.
- Optimised APIs through design changes that improved response times by 80% (from 500 ms to 100 ms) and boosted throughput by 50%.
- Developed fault-tolerant batch processing services handling 5M+ records per run with self-recovery on restart and 30% lower memory footprint than legacy systems.

Netcracker Technology – Pune, India

Software Development Engineer - 1 Backend *Jul - 2019 – Feb 2022*

- Revamped in-house back-end test automation project by refactoring and restructuring the existing codebase, achieved an increase in throughput by 20%
- Designed and automated 50+ E2E tests using TestCafe & Cucumber, simulating actions covering more than 70% of features of the product for both back-end and front-end
- Improved JUnit coverage of cloud-ready microservices from 20% to 90% for 5,000+ lines of code
- Built backup checking system to check accuracy and state of the backup taken using Java and spring boot, Which impacted in identifying the critical gaps in the backups
- Achieved performance boost and security by fixing up to 90% SonarQube issue on scalable micro-service

PROJECTS

Trending article generator - Pune, India

Developer *Jul 2020 – Dec 2020*

- Conceptualize, Designed and Developed monolith application in support with google trending and OpenAI APIs for generating trending articles based on realtime info and stats, Also producing supporting articles for daytoday topics such as How to do.

ACHIEVEMENTS

- Received 5 Stars Gold Badge on Hackerrank for data structures and algorithm
- Achieved 3 Stars with the highest rating of 1783 on CodeChef which is 90+ percentile around the globe
- Secured ranks under 1000 out of 15,000+ contestants in 5+ LeetCode and 10+ CodeChef's contests

EDUCATION

Kolhapur Institute of Technology – Kolhapur, India *May - 2015 - May 2019*

Bachelor of Engineering, Computer Science

ADDITIONAL

Technical: Java 11/21, Spring Boot, Kafka, gRPC, MySQL, MongoDB, Redis, S3, AWS EC2/EKS, CDN

Profiles: codechef.com/users/nikkkhilshinde, codeforces.com/profile/nikkkhilshinde
